

Herb Robert - *Geranium robertianum*

Description

Herb robert is a small green to red tinged plant. It has hairy, deeply incised triangular leaves, fragrant when bruised. Flowers, present spring to summer, are small and pink with 5 petals, set upon hairy stalks.

The plant prefers moist, rich and neutral to basic soils. Herb robert can be found in W8-9 and 12 communities, though can also be found in hedgerows and rocky areas.
